

Rohit Sharma

Technical Support Engineer (Rubrik – Backup & Cloud)

sharmaboys2004@gmail.com — +91-8685006681 — linkedin.com/in/rohit-sharma681

Professional Summary

Rubrik-focused Technical Support Engineer with 3+ years of experience providing enterprise-level support for backup, recovery, replication, and cloud-integrated environments. Strong in end-to-end case ownership, root cause analysis, SLA management, and customer communication. Hands-on with VMware, Windows, Linux, Bash scripting, and working knowledge of AWS, Azure, and GCP. Seeking to transition into a Product-Based Customer Success Engineer role.

Core Skills

Backup & Data Protection: Rubrik (Backup, Restore, Replication, Snapshot, Archival, Policy Management), RPO/RTO, DR Concepts

Virtualization & OS: VMware vSphere, vCenter, VM Snapshots, Windows Server, Linux (Log analysis, services)

Cloud Platforms: AWS EC2, Azure VMs, GCP (Portal-level administration, backup policy application)

Scripting: Bash (script creation and modification), Python (Beginner)

Networking: TCP/IP, DNS, Firewall, VPN, Connectivity Troubleshooting, Wireshark (Basic)

Support: SLA, Escalations, RCA, Knowledge Base, Customer Communication

Professional Experience

Technical Support Engineer – HCLTech

2022 – Present

- Provide enterprise technical support for Rubrik backup and recovery solutions across on-prem and cloud environments.
- Troubleshoot backup failures, restore issues, replication lag, snapshot inconsistencies, and archival problems.
- Support VMware environments including vCenter operations, VM snapshot management, and recovery validation.
- Handle Windows and Linux server issues involving agents, services, performance, and log analysis.
- Work with AWS, Azure, and GCP portals for VM lifecycle management and backup policy configuration.
- Create and modify Bash scripts for log collection, automation, and operational troubleshooting.
- Perform root cause analysis and collaborate with engineering and infrastructure teams for permanent fixes.
- Author knowledge base articles, SOPs, and runbooks to improve resolution time and self-service.
- Manage customer escalations and ensure SLA compliance with clear technical communication.

Projects

AI-Based Cloud Backup & Retrieval System (GCP)

- Designed a cloud-based backup and recovery workflow using Google Cloud Platform.
- Implemented automated backup, restore validation, monitoring, and logging.
- Documented system architecture and troubleshooting procedures.

Education

Bachelor of Science in Design & Computing

BITS Pilani

Additional Information

Strong: Rubrik, VMware, Linux, Windows, Bash, Enterprise Support, RCA

Working Knowledge: AWS, Azure, GCP, Networking

Beginner: Python, Advanced Packet Analysis, Database Tuning
